Descripción

The Spectroscopy and NMR Unit, within the Structural Biology & Biocomputing Programme, is opening a permanent position for a staff technician to support the biophysical characterization services provided by the Unit, and in particular the maintenance and use of the instrumentation for spectrophotometry, fluorimetry, circular dichroism, isothermal titration and differential scanning calorimetries, analytical ultracentrifugation, surface plasmon resonance, nuclear magnetic resonance, etc.

Highly motivated candidates with demonstrated experience in biophysical characterization of proteins and their interactions are encouraged to apply by e-mailing a curriculum vitae, summary of research experience, and names and contact information for two-three references.

Se Requiere

- PhD degree in experimental molecular biophysics or biomolecular spectroscopy.
- Experience in the use of instrumentation (see above) for the spectroscopic and biophysical characterization of proteins and their interactions.
- Ability to enthusiastically interact with a variety of users for experimental design and guidance.
- Computational skills for the acquisition of data, analysis and presentation of results.
- Good knowledge of English.

Se Ofrece

- The opportunity to be part of one of the few European Cancer Research Centres of excellence.
- An excellent working, multidisciplinary environment.
- Competitive salary.
- Benefits package.
